THE ART OF LIQUID CONCRETE

THE ART OF LIQUID
CONCRETE

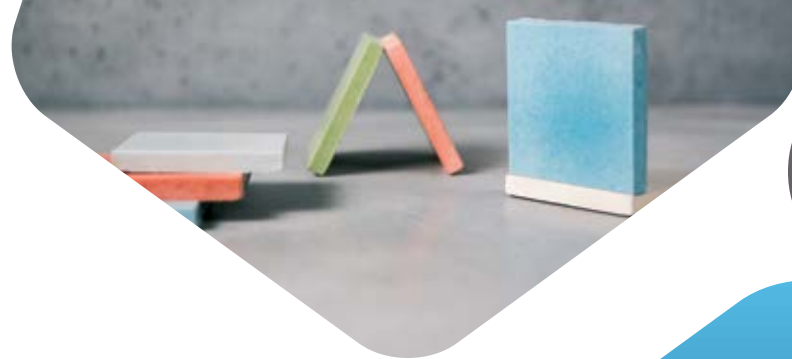

LIQUICON STRIVE FOR EXCELLENCE

The production of LIQUICON design concrete was preceded by **years of research and development**. The **experience** we gained from long-lasting development and **tests** helped us create the most excellent products.

We manufacture top quality products tailored to the needs of our customers – based on **premium quality raw materials**, well established international supplier network, and our own, **unique recipe**.

Our LIQUICON factory focuses on unique, small-scale production and **continuous quality control**: as a result we deliver only flawless items.

We strive for excellence. On the basis of preliminary research and development as well as small-scale production, we set our target to produce one of the thinnest yet dimensionally stable, top quality products on the market. This is not only important for design but also for the sizing of supporting structures like walls or furniture boxes.

CUSTOMIZED PRODUCTS AND SERVICES

LIQUICON products are very special and unique, since every product made of concrete is **individual** and unique. We can **design and manufacture products to match our customers' ideas** as well as the given interior design concept **or the corporate image**. Moreover, we can individually size our existing forms so they fit the available surfaces without cutting or extension.

LIQUICON FLOORING

- Customized sizes and forms (unbroken surfaces)
- **Customized colors and structures** to match the interior design concept
- Perfect, seamless edges, no tile sealers necessary
- Wear-resistant, ultra-high stability concrete
- Customized colors (added dyes) and thickness

LIQUICON TILES

- Amazing “liquid” 3D design
- **Customized sizes, colors, and structure** to match the architectural concept
- **Fully customized forms, patterns, or graphics** designed and built according to the needs of the customer
- Our products are lighter and thinner than similar commercially available products yet with the same stability and durability

LIQUICON KITCHEN COUNTERTOPS

- Uniquely designed forms and shapes (e.g. L- or U-shape), customized sizes (XXL also), **unbroken surfaces**
- Perfect, seamless edges, no tile sealers
- Wear-resistant, ultra-high stability concrete
- Customized colors (added dyes) and thickness
- Our products are thinner than similar products on the market yet with the same stability

LIQUICON COLLECTIBLE DESIGN

- Fully customized design products, **decoration**, to match the flooring
 - Returning motifs, patterns, colors, or even dissimilar structures add harmony and style to your home
 - The shape of a fruit bowl reflecting in the kitchen tile, the flower pot or lamp that matches the flooring
- Possibilities are endless – let nothing limit them

LIQUICON WINDOW SILLS

- Customized sizes and forms
- **Customized colors** (added dyes), structure, and thickness to match the interior design concept
- **Wear-resistant, ultra-high stability and durability concrete**

LIQUICON CONCRETE

Concrete is a live substance! Our natural raw materials give amazing, **natural-looking surfaces** that are unique and customized since each and every piece is a little different from each other.

We are on the cutting edge of concrete production technologies with our technology and premium raw materials materials with the aim of providing our customers with the possible best products on the market.

LIQUICON COLORS

Our colors and shades are similar to the **RAL color chart**. We can create surfaces to match the environs: walls, furniture, or even the outdoor environment.

We can create **special polished, gold, or metallic surfaces** to match the architectural requirements, e.g. in case of wall covers or other surfaces that are not exposed to strong mechanical impact.

LIQUICON STRUCTURES

Thanks to the different production technology we apply as well as to our experience, we can create multiple material structures to blend with the environs and the interior design. Our structures **range from traditional, raw concrete surfaces to smooth, polished, high-gloss or reflective surfaces**, from non-slip floor tiles to smooth kitchen countertops.

LIQUICON SIZES

Size matters. **Our products are thinner than most products available on the market yet they are characterized by the same durability and stability.** We can produce unbroken surfaces even in XXL-size, e.g. kitchen countertops, with the input of the owner (e.g. L- or U-shapes, etc.). No glue, no sealer needed.

ABOUT US

OUR TEAM AND OWNERS GUARANTEE EXPERTISE AND EXPERIENCE

THE ECOOL GROUP

The LIQUICON brand was created under the umbrella of the ECOOL Group, a major supplier of lubricants and Total Fluid Management in the CEE region. Our company has over 20 years of experience, a sound background, and is supported by highly-skilled and qualified experts. We are suppliers for major European industrial players like GE, Bosch, or Siemens.

We offer products, quality services, and professional solutions in a complex system. Our “business DNA”, that is, our way of thinking, experience, and quality is inherited by the new LIQUICON industry.

ecool
GROUP

- A decade of experience in the production of concrete surfaces, ultra-high stability, and self-sealing concrete.

- Significant expertise in concrete quality management and quality assurance as well as material technological development, planning, and implementation.

**ARCHITECT,
CONCRETE TECHNOLOGIST**

András Eipl

- My motto:

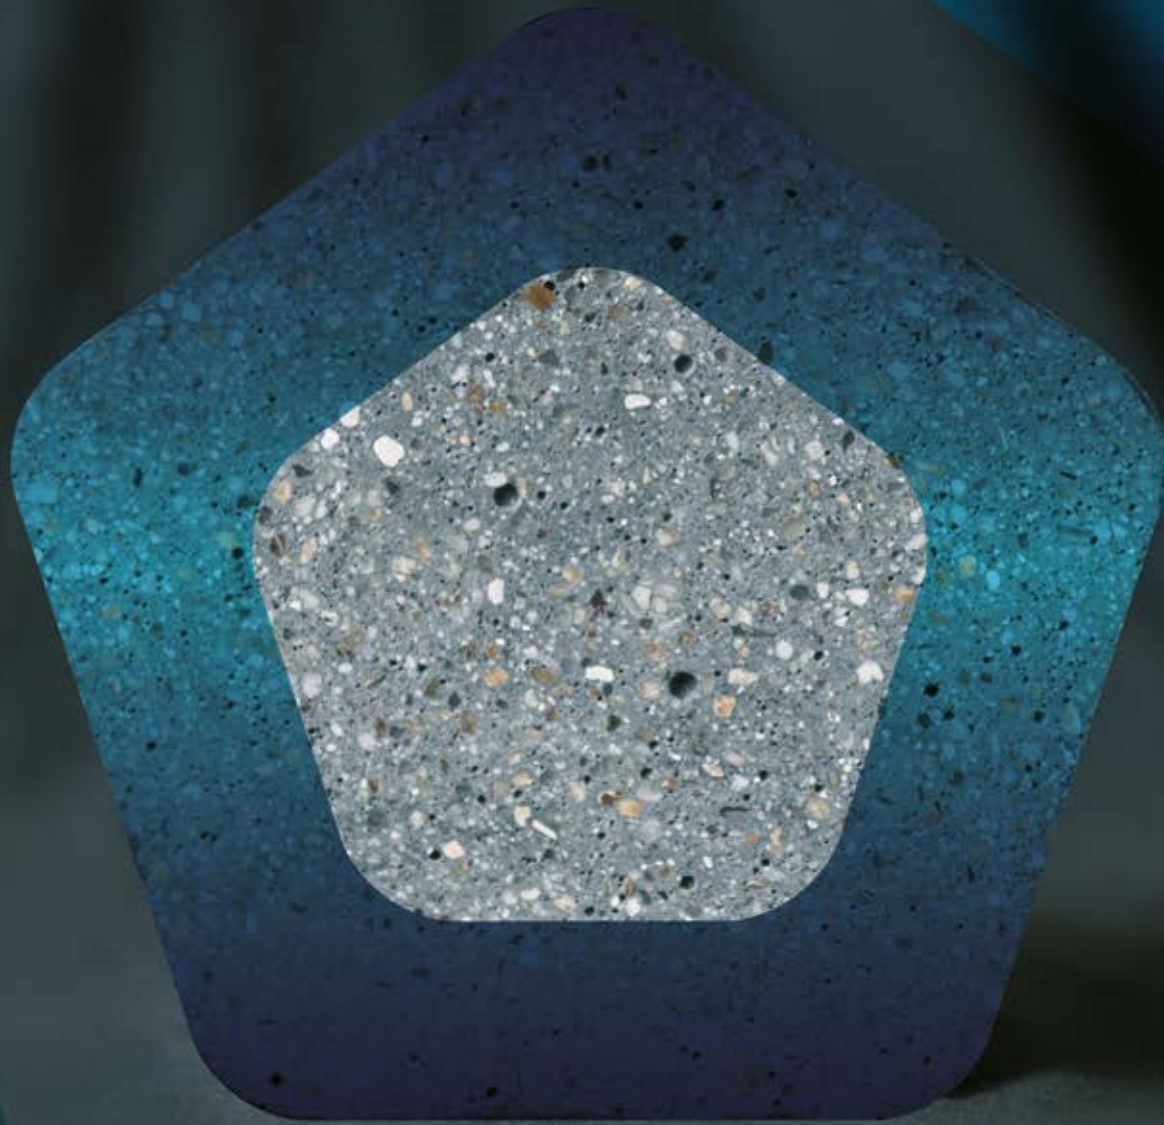

“In design, I want to transfer beauty and value in everyday life. I want to reach out to people and touch their emotions by different visual arts pieces that convey both concept and content.”

- International and national design competition awards
- Publications in design blogs and magazines
